

INI-LEV-ECO

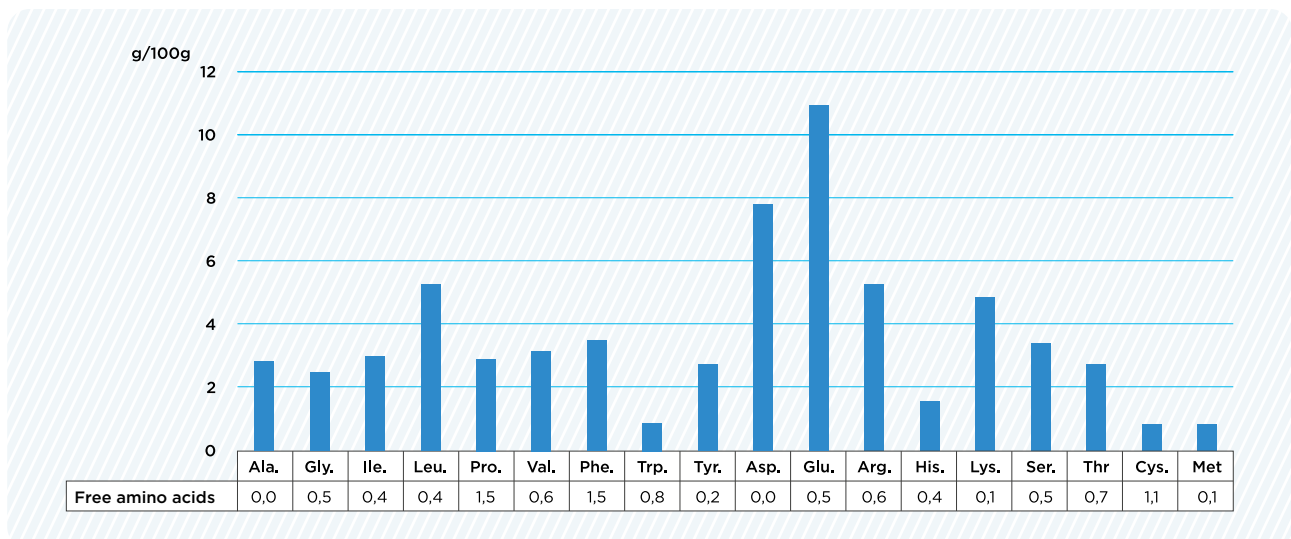

INI-LEV-ECO is a 100% organic product that originates from a mixture of yeast extracts.

It contains a rich and defined compositional mixture of amino acids, peptides and cofactors, macronutrients and micronutrients (mg, P, K, etc.) that help to better enzymatic transcription of the yeasts for metabolism and for optimal new cell generation.

INI-LEV-ECO is the ideal candidate not only for obtaining well-formed new cell generation, but also thanks to its amino acid rich composition, it proposes aromatic precursors that enhance and intensify the sensory matrix profile. It also prevents the formation of reductive compounds.

INI-LEV-ECO increases the NFA 27ppm to a 20g/Hl dosing.

Application:

In exponential or tumultuous phase. When we have a fall in density of 5-10 units from the initial density. **INI-LEV-ECO** prevents and feeds yeasts to avoid early reductions that can condition metabolic stress and cause difficult endings and/or stuck fermentations.

Characteristics:

Beige powder.

Method of use:

Mix with must at a ratio of 10 times the weight of **INI-LEV-ECO** and add to the fermentation tank.

Preservation:

Store in a dark, dry place, free from odours.
