

NUTRI-LEV

NUTRI-LEV is a **mixed nutrient** that provides adequate nutrition at critical stages of fermentation, **preventing reductions**.

NUTRI-LEV is made up of N α -amine which enhances the aromatic profile and N-ammonia which favours the metabolism and cellular generation of yeasts of yeasts.

Application:

- **In the barrelling, only if we have musts with NFA below 180.**

Add **NUTRI-LEV** to reach NFA between 180-200. (20g/hl increase 30mg/l (ppm). Contains 4.82% protein).

- **In exponential or tumultuous phase.** When we have a **falls in density as small as (-5 or 10)** with regard to the initial density. **NUTRI-LEV** prevents and feeds yeasts to avoid ammonia shortages early reductions that can condition metabolic stress and cause difficult endings and/or stuck fermentations. Dose in this phase: 20 g/hl.

Characteristics:

Beige powder.

Method of use:

Mix with must at a ratio of 10 times the weight of **NUTRI-LEV** and add to the fermentation tank.

Preservation:

Store in a dark, dry place, free from odours.
