

# VITIS N PLUS

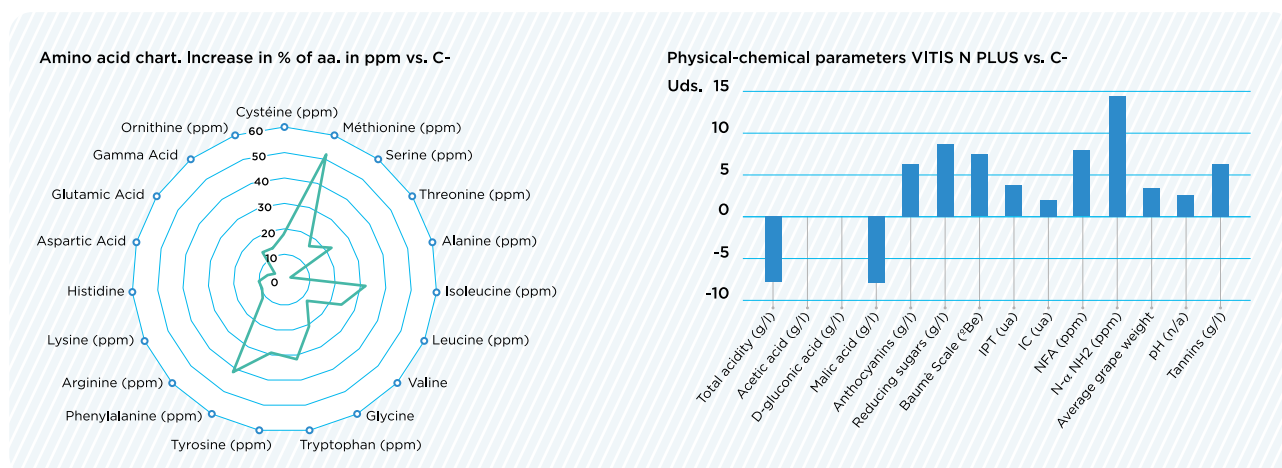

**VITIS N PLUS** is a **biofertiliser based on special yeast lysates**. It is rich in **amino acids and cofactors**, macronutrients and micronutrients, which favour a nutritional contribution with great organic load for the terroir.

In different tests that place **VITIS N PLUS** up against negative controls, it has been observed that the use of **VITIS N PLUS** results in an **advance of the polyphenolic ripening** at the time of harvest (IPT, tannins and anthocyanins), as well as an **increase in the crop yield under stress conditions**.

## Results:

- Improves physical-chemical ripening indices.
- Application is consistent at foliar level.
- Increase of  $\alpha$ -NH<sub>2</sub> organic nitrogen by up to 15%.
- Increase in essential amino acid musts of protective action against pathogens, increase in photosynthetic activity and accumulation of nitrogenous substances (aromatic precursors and plant vitality).
- Increased yield in weight per grape by 6% under stress conditions, at critical times for plant physiology.

## Application:

- **First foliar treatment:** during flowering or grain formation.
- **Second foliar treatment:** 15-20 days after the first treatment.

## Characteristics:

Beige powder.

## Method of use:

Dissolve 1.5 kg of **VITIS N PLUS** in 250 litres of water and apply over 1 hectare.

## Preservation:

Store in a dark, dry place, free from odours.
